as the head of marketing i saw thee recent campaign and wanted to check if our marketing campaign made a change in customer purchase. We have done this research in order to ensure that we are using the budget across different business segments. We will do this by comparing the relationship of what we spent and what customers buy, so we can identify which strategies are most profitable. Which will allow us to plan our future campaigns by keeping in mind the most sucessfull customer behaviours

only 4 sentences

As the Head of Marketing, I reviewed the recent campaign to assess its impact on customer purchasing behavior. This analysis was conducted to ensure our budget is being allocated effectively across different business segments. We evaluated the relationship between marketing spend and customer purchases to identify the most profitable strategies. These insights will guide our future campaigns by focusing on the customer behaviors that drive the best results.

Did spending more on marketing encouraged to customers buying more?
We will check the pattern and based on that we can decide which segment responded best on our campaign. Which will allow us to decide our future marketing budget

Did increased marketing spend encourage customers to make more purchases? We will analyze the patterns to determine which segments responded best to our campaign. Based on these insights, we can make informed decisions about allocating our future marketing budget.

This dataset contains information about 150 customers from a marketing campaign run last quarter. For every customer we have track of how much they have spent and how many times they have visited which is calculated by the amount spent on marketing per customer. Customers are also grouped into three segments Consumer, SMB, and Enterprise.

Before analysing some cleaning was done, dates were in various formats so we converted them in a single format. Customers who did not visited or purchased anything from us were removed since they are not useful for our analysis. The column notes was removed since the column did not have any useful information for our analysis

Here's a clean and polished version with better grammar and clarity:

This dataset contains information on 150 customers from a marketing campaign conducted last quarter. For each customer, we have tracked their total spending and the number of visits, along with the marketing spend allocated per customer. Customers are also categorized into three segments: Consumer, SMB, and Enterprise.

Before analysis, data cleaning was performed to ensure consistency and accuracy. Date values were in multiple formats, so they were standardized into a single format. Customers who neither visited nor made any purchases were removed, as they did not contribute to the analysis, and the "notes" column was dropped due to its lack of relevant information.

Figure 2 shows the relationship between marketing spend and purchase amount among all the customers. It is visible that the line goes upward from left to right meaning that higher marketing spend does lead to higher purchase amounts. Figure 3 displays the same relationship

divided by segments, where all three segments are Consumer, SMB and Enterprise show the same upward trend, meaning higher spend led to more purchases across all customer groups.

help me correct its english and improve the grammar as well

Figure 2 illustrates the relationship between marketing spend and purchase amount across all customers. The upward trend from left to right indicates that higher marketing spend is associated with increased purchase amounts. Figure 3 presents the same relationship segmented by customer groups. All three segments—Consumer, SMB, and Enterprise—show a similar upward trend, suggesting that higher spend leads to increased purchases across all groups.
